

**URANOSCOPIA**  
OR AN  
**ALMANACK**

**AND PROGNOSTICATION,**  
Being a Prospective Glasse  
for the yeare of Christ, 1649.

And from the Creation, 5642.

Which is the first after the Bissextile  
or Leape yeare.

Wherein you may view the  
*whole state and condition of the same,*  
together with all the Lunations, Plan-  
*etary motions, Conjunctions, Aspe-*  
*cts, and configurations, as also*  
*Eclipses & their effects,*  
Astrologically handled.

Calculated exactly for the latitude of  
51. degrees, 32 minutes, & Longitude  
of 24 degrees 20 minutes, agreeing neereſt to the  
Meridian of the populous City of London.

Composed by JOHN BOORER.

AMbVlabilis Vt VIVaris et bene Vobis,  
et proteLent Vr Dles Vestrl terra Vestræ  
possessions.

**C**alli volumen qui macris arctas tuas  
 Ingens tabellis, & Mathēsin sydeream  
 In marginales qui coactam angustias  
 Pannosa ventitis gregi quem toga tegit,  
 Fave age! minuto quid palatia superum  
 Asse colis? ac inter Quirites aulicus  
 Polimicantis, sat pudenda sordidū  
 Terræ inquilinis, indigenæ aperis obori  
 Mercede fata? Nec Venus libidinans  
 Impuræ rabiosam fibrâ immisceat  
 Temiginam humanis, sui nec orba fratris  
 Phæbe laborans, usq; nigricante sinu  
 Velata terra fileat, Enthea et furor  
 Te protinus agat, tunc tremenda Deū, omnia  
 (Te vate) respuentes territant aures: misera hoc  
 Dum plebs diū formidat, assidue patitur.  
 Promunt querelam hinc tōt minarum fidicula  
 In farta quod non parciōr Cyllenius  
 Piceatus acuat, quod cruentos præparet  
 Ludos Gradiū solitario ferox  
 Et culminans Cælo, benigniore neq;  
 Nullo sit a Jove fractus. Hosti tibi præscia  
 Aperittimores mens; Prôphanum an nā pecus  
 Scias Deorum facibus Orbium minas  
 Patere? conscj; nec ultra sydera  
 Abesse vindicem? piē sit Faridicus  
 Placeas. At interim sacrum quodq; penetret  
 Non ipse Phæbus (pace dixerim poli)  
 Ignosce sapienti, bonoq; pectus; hic  
 Vagantium videt facum tyrannidem;  
 Plenus Deoque consultis sese, sibi que  
 Cælum, suas miratur influentias  
 Sine hac Ephemeridum tuarum sensu, sic  
 Securus & Blattarum, edacisq; Tincæ,  
 Curru quotannis gesties Phæbi comes.

**H** Aud improvise gaudebunt Astra triumphis  
Frustrabunt decreta viri, si tristis aequo  
In terras se viri parent, Documenta dedere  
De Caelo vates: resonant Oracula terris,  
Stellatas intrasse Damos, secretaque fari  
Sic retulisse juvat. tractas commercia magna,  
Archetypos imitantq; patres, sublimia tentas,  
Astuat Ars tenna, tua dum sit classa libello  
Te tamen Atlantem loquitur Pigmæa Tabella,  
Sic Calum cervice ferens, extendis in ænum  
Aeternum nomen stellis super æthera notum,  
Annua iste liber vigeat: sed Fama perennis.

To the Same.

**V**oluminous Heavens are epitomiz'd here  
To show th'exact Description of a yeare.  
I praise thy knowledge which aspires thus high,  
And handleth subjects far above the sky,  
Heavens are thy Bookes, nor can thy Comments erre  
Since in each Page th'art guided by a Starre  
Yet should they faile, thine eyes might leade thee next  
To the Authors Throne who sits above the Text  
And view's his works, though angry much to see  
Mortals deprive it of i'ts dignitie,  
Stiling those glorious and ætheriall Kings  
But vaine Spectators of inferiour things.  
He gives them pow'r, in moving to encline,  
And Man a pow'r, from their pow'r to divine  
On Gods rare works, who doth most strictly gaze,  
He attributes most to the Makers praise.  
What doe we owe to thee then that from high  
Dost stoop thus humbly to each vulgar eye?  
Know that thy fame shall live: And spite of jarrs  
Thy worth shall place thy Name above thy Starrs,  
While others blush to see what Art they lack  
They write their follies: thou, the Almanack.

Look on the right or left had of this table & you shall have the day of  
the mō. over against which day of the mō. in the right angle under the  
you have the age of the D, which age if you seek in the uppermost col.  
of the other table on the left had, you shall find the ho. & min. of full sea  
at the place desired, As for example, This year the 1 of Jan. the D is 28  
daies old, which found on the other side, over against Quinborow, & un-  
der the Ds age decre. 28 is 10 hou. 24 min. or full sea at Quinborow  
at 10 a clock 24 min. At Rochester at 11 a clock 9 min. at Graves  
and 11 a clock 54 min. at Dundee 12 a clock 39 min. & at London 1.  
of the clock 24 min. past it is high water; Et sic in ceteris.

# January hath X XXI Dayes.

The New yeares new moone purifies the ayre.  
*A* platick line of *Jove*. and *Saturnes* neere :  
*Hermes* with *Jupiter* doth commixe his Rayes  
*Saturne* and *Mars* doe *Venus* both displease.  
 Thus sometimes cleereftsoones both raine and snow,  
*A* calme sometimes, anon the windes doe blow.

February 1

# February hath XXVIII Dayes.

I though *Mars* oppose both *Hermes* and the *Sun*,  
And *Saturn* frown, we are not yet undone,  
They walke their rounds in order; if there be,  
Any distempers 'mongst us, then 'tis we  
That cause them; Tis the power offate  
T'incline us strangely; nor necessitate.

# March hath XXXI Dayes.

The winds doe bluster men are high in words,  
 Or in Petitions; what complaints are here?  
 I with we be not forc't to draw our swords,  
 Weare not fully settled yet I feare.  
 Religion, Liberty, and Lawes at stake,  
 Execute Justice, let the Wicked quake.

# April hath XXX Dayes.

Look how unseasonably doth *Venus* court  
Disabled *Saturn*, to forbidden sport?  
After a calme unlookt for, stormes appeares,  
And suddain joy eftsoone brings suddain teares;  
Then leave off quickly, God doth hate all sinne  
And he will punish, when he doth begin.

# May hath XXXI Dayes.

The Moone being wholly darkned, and the Sun  
With peevish Saturne in conjunction.  
And Mars his hatefull square to Mercury  
Do threat disasters unto Gemini.  
Beware of treacherous plots, a faigned friend  
MAY bring about, just as the moneth doth end.

# July hath XXXI daies.

This moneth's first, second week, some thundring storme  
For *Jove* and *Mars* are met, what more alarmes?  
The ayre above may much perturbed be,  
And we below from jars not fully free;  
Sunne, Moone, and Stars have influence, order, light,  
But man alone's fall'n from his pristine plighr.

# August hath XXXI daies.

Oh! twice, thrice happy he, who shuns the cares  
Of City troubles, and of State affaires,  
And he whom Drum, Fife, Trumpet's loud Alarm's  
Make not to startle out of sleep to Armes,  
But gathers in earths plenty, who dorch beare  
Abundant store of fruit, ripe every where.

# September hath XXX daies.

Winds roare, seas swell, great feare on every side,  
 What Sol and Saturnes square may us betide;  
 He Lib. a, this doth Cancer now possesse;  
 Both at one moment make me shrewdly guesse,  
 Some deadly feud twixt rich and potent men,  
 It hath been so, and may be so againe.

October

# October hath XXXI daies.

Some certainty may from the Stars be known,  
Of weale, or woe, life, death, of Thrall, or Throne.  
Truth's in that Art! which shewes the constant course  
Of restless bodies influence and force,  
Whereby men may foretell from their Aspects  
Variety of good and bad effects.

# November hath xxx daies.

How sadly lookes the Moone? what dire position,  
 I'th Heavens through Mars and Saturnes opposition?  
 We should dispaire, were not a friendly Trine  
 Of Saturne mixed, when both fortunes joyn;  
 Thus all is govern'd by Gods soveraigne might,  
 Happy that man that understands aright.

[illegible]

# December hath XXXI daies.

How opposite's this moneth to some mens zeale,  
Whose false devotion fires the Common-weale?  
Saturne and Luna both oppose the Sun,  
And threaten janglings 'bout Religion,  
And Mercury doth haste to play his pranks,  
In scurrile Pamphlets; Give him little thanks.

Thus we are form'd, Head, Neck, Arms, Breast, Heart, Womb,  
Loynes, Secrets, Thighs, Knees, Legges, Feet, & so on to  
The Twelve Signes, Verſe.

Ar. T. u. Gem. Can. Lc. Virg. Lib. Scor. Sag. Cap. A. uar. P.  
V. 8. II. 6. 8. 10. 12. 14. 16. 18. 20. 22. 24.

Sex in lacte diet, Ter sunt in  
sanguine trini,  
Sex sunt carnes, Ter sunt membra  
figurant.

The first six dayes, like milk, the  
fruitfull seed  
inject: And the wombe, remain-  
eth still;  
Then eker nine, of milk, red blood  
do breed,  
Twelve dayes turn blood to flesh,  
by Cassues skill;  
Twice nine firme parts, the rest  
ripe birth do make,  
Such shape and forme, in time,  
man doo partake.

As Astrologers doe attribute the first month after the Conception to the Planet Saturn  
whose influence the Seed in the Wombe is retained and fixt: The second month is  
to Jupiter, who gives increase to the Seed, and layes the foundation of the Senses and Intel-  
lections: The third month is proper to Mars, who adies heat unto the Infant, and prepares it for  
action: The fourth month the Sun challengeth as the author and moderatour of the vitall  
functions: The fifth month is given to Venus, who is signification of comeliness and beauty: The  
sixth month is appropriated to Mercury, by vertue of whom the members of the young child  
were conjoined, are now separat, and distinguished: The seventh month is bestowed  
on the Moon, who completes the child in the womb, makes it perfect, filling up the clefts,  
and crannies in the body, opening the passages by which it is brought to light: They  
are born in this month may live by reason of the complement, or fulfilling of the Plan-  
etions. But if it happen one to be born in the eighth month, they are most part either  
dead, or lives but a short time, by reason the disposition is returned to Saturn again, who  
denies to Nature, in all his qualities: And therefore the most frequent and naturall bir-  
th is deferred to the ninth month: At which time the benevolent Planet Jupiter takes  
government again upon him. In which perfect birth the Moon returns to the ligne ascen-  
dant at the time of Conception, or the opposite thereof, or to the Planet with whom she  
was at the conception, or his Aspect, or to the Signe wherein she was then, and locke in what Signe  
the Moon was in at the birth, the same Signe was Ascendant at the conception, And that Signe  
in at the conception, either that or the opposite is the Ascendant at the Birth. Ptolem. 1.  
1. Centilog.

# A PROGNOSTICATION,

*Breaker*, 1649.

The severall Columns and Parts of this yeers  
ALMANACK, in every Moneth explained.

In the first Column on the left hand you have the dayes of the moneth.

In the second, the dayes of the week, G. being Sunday-letter, as it is used in *England*, and many other places not yet reformed.

In the third, you have remarkable (formerly called Holy) dayes, the Returns of the Terms, wherein likewise you have the latitude of the Planets, and the Moons conjunction with them; by which you may easily be known, if the dayes be observed: You must understand, that the letter S. signifieth South, N. North, A. ascending, D. descending; and the first figure in the same Coloumn signifieth degree, the next minutes: As in *January* the second day, you see these characters, *h* lat. S. D. 1. 41. which tels you, that day *hath* latitude South descending, one degree, forty one minutes; the third day this, *V* lat. N. A. 1. 24. that is, *Jupiter* hath latitude North ascending, one degree, twenty four minutes; and so for the rest of the Planets in every Moneth, which by proportion may be easily found out every day in the year.

In the fourth Column you have the Sign, degree and minute exactly calculated for the Moon in the Meridian of *London*, much observed by common people.

In the fifth you have the denomination of the Moons latitude, North South, ascending or descending; and in the sixth Column, the degrees and minutes of such latitude. And you must observe, when the Moon hath latitude North ascending 00. degr. 00. min. she is with the Dragons head; and when she hath latitude South ascending 0. degr. min. she is then with the Dragons tail: which if either of these happen

## A PROGNOSTICATION,

happens at new *Moon*; then will the *Sun* be eclipsed; but if at *Full Moon*, then will the *Moon* be eclipsed.

In the seventh Column is the hour and minute of *Sun*-*rising* at *London*, by which may be known the time of his setting; together with the length of the day and night; which shall be explained in this example: The first day of *January*, I finde in that seventh column these figures, 8. 2. that is, the *Sun* riseth at eight of the clock, and two minutes; now if you take this 8. 2. from twelve hours, there will remain three hours, 58. minutes, which is the time the *Sun* is that day. This *Sun*-setting if you double, the length of the day will be seven hours, 56. minutes: but if you double the *Sun*-rising, you shall have the length of the night, which the first of *January* is five hours, four minutes long. Do thus for any other day in the year, and you shall have your desire.

In the eighth and last Column of that Page, you may observe a probable conjecture of the inclination and disposition of the *Ayre*, mixed with other matters, need upon such dayes of the *Month* as narrowness of that Column would permit, &c.

On the right-hand Page, on the head of it, you have the Sign, day, and minute of the five Planets  $\gamma$  Saturn,  $\zeta$  Jupiter,  $\mars$  Mars,  $\nu$  Venus,  $\mercurius$  Mercury, and the  $\cap$  Dragons head, once every five dayes every *Month*, which by proportion may be neer calculated every day in the year: together, whether the Planets be Orientall, Occidental, Retrograde or Direct; very usefull and necessary to be known, the Inequious will confesse, &c.

In the blank page you have the dayes of the *Month* and Week, the third column of that Page is the Sign, degree and minute of the *Sun* at noon, every day this year at *London*, with the New, Full, and Quarters of the  $\text{☾}$ , the time thereof, the Sign and degree alsoing at that moment; together with the aspects of the Planets among themselves, of great force in the change of *Ayre*, &c. the *Moon* aspects to the Planets, being for the most part daily so many, as to set out, for indeed one Page in every *Month* will but hold them.

You have likewise in that Page the *Roman* Account, being dayes before ours, C. being their *Dominicall* Letter; and you have so the true Account, together with E. the *Dominicall* letter, as should be both with us, them, and all others, &c.

## Of the SPRING.

**T**He *Sun* enters  $\gamma$  Aries Astronomically upon Friday the 14. day of *March* this year, 14. hours, 21. minutes past afternoo

As we usually accompt, upon Saturday the tenth day of *March*, at  
 12 minutes past two of the clock in the morning, in the Meridian of  
 London: At which time the second degree, 13. minutes of  $\cap$  Capri-  
 corn doth arise in the East; all the Planets at that moment being sub-  
 stantially, except  $\cup$  Jupiter and  $\♂$  Mars,  $\cup$  being directly South-  
 west, but  $\♂$  declining more Westward. The  $\odot$  in this position ha-  
 ving to an  $\odot$  of  $\cap$ , which happeneth the 14. day about three of the  
 clock after noon: the  $\odot$  at the Sun's ingress was about 4. degr. distant  
 from  $\cap$ . And if it be observed that north of *March* about seven a  
 clock in the evening, you shall see the  $\odot$  and  $\cap$  very neer together in  
 the South-west, the rest of the Planets thus posited;  $\odot$  exactly in the  
 North angle, the  $\star$  in the second house,  $\psi$  in the third house,  $\imath$  and  
 the  $\jmath$  in the sixth house,  $\♂$  in the eighth house,  $\cup$  near the cusp of  
 the ninth house. Having collected the testimonies of all the Planets,  
 according to the most received opinion, and known experience,  $\♂$  is  
 found abundantly to exceed all the other Planets in Dignities: so that  
 most of this years actions will participate of the nature and influence  
 of  $\♂$ . He hath in this quarter 47. Dignities, in the Summer 27. in the  
 Harvest 12. in the Winter 32. Dignities; all which make together 118  
 The next is  $\odot$ . who hath 44. Dignities, collected together in the four  
 quarters of the yeer; then,  $\cup$  36.  $\imath$  32.  $\psi$  22.  $\star$  14.  $\jmath$  10. Thus  
 we may observe  $\♂$  to be sole Dominator, or Significator of the yeer,  
 and  $\odot$  to participate with him; yet so as the other Planets now and  
 then mix their influence with them, though the Luminaries more re-  
 sille and weakly. In generally, as  $\♂$  is posited in the eighth house at  
 the  $\odot$  his ingress in *Figura Mundi*, in the latter part of the fiery hot  
 sign  $\cap$ , and by his retrograde motion meeteth first with the  $\Delta$  of  $\psi$ ,  
 then with the  $\odot$  of  $\psi$  neer the *Fleudes*, or seven Stars, in the North  
 angle. It cannot be otherwise naturally expected, or Astrologically  
 predicted, then an extraordinary inclination to a distemperature of  
 the Ayre, producing pestilentiall, consuming and rotting  
 mounds, raising thick Thunder-bearing Clouds, with much Lightning,  
 and great shows of Rain; for this position is one of them which the  
 Astrologians term, *Aperitiones portarum seu valvarum Celi*; The  
 openings of the Gates, Doors or Windows of Heaven: three of which  
 there be; the first is of  $\imath$  and the  $\star$  or the  $\jmath$ , in  $\cap$ ,  $\♂$  or  $\square$  aspect  
 whose operation is in dark, cold, cloudy, rainy or snowy, frosty Wea-  
 ther, as the season of the yeer they happen to be in, and the Sign hot,  
 cold, moist or dry. The second is of  $\cup$  and  $\psi$ , whose influence is  
 to produce vehement, turbulent and stormy Windes. The third and  
 last is of  $\♂$  and  $\odot$ , which is in Showrs, Thunder and Lightning, &c.  
 These *Aperitiones Portarum* happen many times in the yeer; but most  
 evidently manifest themselves when the  $\odot$  separates from one of the  
 significators by body or aspect, and applyeth to the other. This posi-  
 tion of  $\♂$  before-mentioned, doth forewarn us, that Seditions, Tu-  
 mults

## A PROGNOSTICATION,

mules and Uproars are not yet appeased, contumelious and bitter Re-  
 proaches are belched out still by wicked and prophane Incendiaries:  
 Rapines, Thefts, Murders, Robberies, &c. are still committed: and  
 I would to God our home-bred differences might have an end, and  
 the Authors, Fomentors and Abettors of the late, and I fear the yet  
 continuing unparalelled, unnaturall bloody War, may have the reward  
 due to them: which seems to me neer at hand; for  $\odot$  as disposer of  
 the Mid-heaven at the Suns Ingresse, is in the eighth house, in *Domus*  
*Mortis*; and the  $\odot$  hastening to the  $\odot$  of  $\mathcal{V}$ , may stir up the Mag-  
 strates to execute Justice: untill which Sword be drawn, we must ne-  
 ver expect the Sword of War will be sheathed. I observe further, the  
 $\mathcal{H}$  Lord of the Horoscope of this year, is in the sixth house in  $\Pi$ , from  
 whom the  $\mathcal{D}$  is scarcely separated, nay, rather in exact  $\odot$ , to be the  
 forerunner of many Diseases to many men, with a great disquiet of  
 minde, and distempered body, occasioned through multiplicity of af-  
 fairs, great Consumptions, with Sorrow and Imprisonment, unlesse the  
 Moons defluxion from him, to a  $\times$  of  $\mathcal{Q}$  and  $\mathcal{H}$ , who hasten to a  
 aspect, mitigate: the position of  $\mathcal{Q}$  in the fourth house, by the judg-  
 ment of *Naly*, and other Authors, doth signifie, *Zekitiam virorum*  
*erga mulieres, unda egressum eis non concedent, & quasi oclusas ha-*  
*bebunt*: and it is to be feared, the  $\square$  of  $\mathcal{H}$  and  $\mathcal{Q}$  will not a little  
 augment the evil thereof; *propter concubium multos illatos*: but  
 hope the end of the year will prove better, and more fortunate than  
 the beginning.

### Of the SUMMER.

Summer takes beginning on Monday the 11. of June, 37. minutes  
 past five of the clock in the morning, at which moment of time the  
 $\odot$  22-deg. & 30.min. of *Barilith*,  $\odot$  being exactly upon the cusp of the  
 ascendant, retrograde; the  $\mathcal{D}$  going from a  $\triangle$  of  $\mathcal{Q}$  to a  $\times$  of  $\mathcal{H}$  and  
 of  $\mathcal{Q}$ ; she disposeth of the ascendant of this quarter, but is very  
 fortunately placed in  $\text{III}$  her Fall, in the fifth house: besides, the  
 $\mathcal{H}$  and  $\mathcal{H}$  incident: and if we look upon the new Moon preceeding  
 $\odot$  his ingresse into  $\mathcal{B}$ , which was the last of May: we shall observe  
 the  $\mathcal{D}$  defluxing from the body of the  $\odot$ , to the  $\odot$  of  $\mathcal{H}$  and  $\mathcal{Q}$  upon  
 the ascendant, the  $\odot$ ,  $\mathcal{D}$  and  $\mathcal{H}$  all corporally together: and if we  
 look upon the *Plenitumum* postventionall the 14. of June, we shall  
 see  $\mathcal{H}$  in the Mid-heaven, and  $\mathcal{H}$  horoscopically, in  $\square$  one of another  
 in humane Signs, and equally distant from the South and East angles.  
 This is a good position, I pray God it may prove otherwise than in  
 naturall course may be expected: for can we look from  $\mathcal{H}$  any other

then in loco donationum & aliorum placibilium quod multa mala evadent  
injuries, rixe contentiones, atque contrarietates inter divites atque magnates : Indeed *Abunazar* sayes, that if ☿ be neer, or in the ascendant, as he is now, there shall be a continuation of War and Divisions, great and painfull Diseases of the Eyes, and unseparable infirmities happening to many men, especially those under ♀, ☿, ☿ and ♄ : and these Countreyes, Cities, Towns, and other Places, that have not yet felt the smart of these late scourgings, I am afraid are under the lash. This is harsh musick in the ears of some ; but it is not possible to be otherwise in humane reason, when there is nothing but division.

## Of the HARVEST.

THE ☉ entereth the Equinoctiall Sign ♊, upon Wednesday the twelfth of September, 16. minutes past eight of the clock in the night ; at which moment of time the 5. degr. 37. min of ♊ is Horoscopically, the right foot of *Auriga*, or the end of the North horn of the Bull rising therewith ; a Star of the third magnitude, of the nature of ☿ and ♀, and presently after, many Stars appear in the East of the same magnitude, but of mixt natures, one of ♀ and ♄, many of the nature of ♄ alone, many of ☿ alone, and some of ☿ and ♄ ; but amongst the more remarkable ones, *Pomahand* in the mouth of the South Fish, and end of the water of ♋, a Star of the first magnitude, having 21. degr. of South latitude, and nature of ♀ and ♀ ; as likewise the South Eye of the Bull, commonly called *Aldebaran*, a fiery star, wholly of the nature of bloody ☿, and of the first magnitude, keeps above the Horizon. Now if we observe the position of the Planets at this time, we shall finde ♄ newly entered ♋, as the ☉ enters ♊ ; this in his Fall, and the other in his Detriment, ♀ having 42. dignities, and ♄ 26. far exceeding the other heavenly Lights ; by which means their power is most strong this quarter. This ☉ of ☉ and ♄ is a strong *Aprio Portarum* : But if we look upon the New Moon next following the ☉ his ingress into ♋, we shall observe the Moon separateth from the ☉, and immediately applyeth to the body of ♄ and ♀, which is on the 26. day of September ; both which are exactly in ☿ with *Spica* ♋, a Star with whom the ☉ did set but two dayes before, of the nature of ♀ and ☿, of the first magnitude ; at which time there was a ☿ of ☿ and ♀ : so that it is very observable, that in this Moneth of September there are three very great and powerful *Apertiones Portarum* : the first of the ☉ and ♄, then of ☿ and ♀, and this of ♄ and ♀ ; so forcible arguments of the verity of Astrology, and influence of the celestiall bodies, sufficient to muzzle

## A PROGNOSTICATION.

the chaps of those rayling *Astronomers* both in Presse and Pub  
 Let any one of them observe the disposition of the Ayre about the  
 his ingresse; so likewise the 14, 15, 18, 19, 22, 24, 25, 26, and  
 dayes of September, and the most criticall, carrying Joylist of them  
 cannot chuse but confesse, *This is strange Weather at Michaelmas.*  
 nature of these severall *Aperianes Perurum*, I have briefly spo  
 of in the description of the Spring, to which I refer you: he is Lord  
 the tenth house, which is *Cor Celi, Cuspis Regalis, & Domus Reg*  
*Hely* saith, in parte 8. de iudiciis Astorum; *Si hoc applicum inter*  
*turnum & Solen, fuerit de quarta; & fuerit de sua quarta domo, sig*  
*ficat quod Reges* (it may be as well meant other kinde of Govern  
 or Magistrates, &c.) *in suis rebus se abcondent, & consultabunt,*  
*facient res & facta sua in magno sec eto.* The most remarkable place  
 amongst the rest are those under ☿ and ♀, which you may read  
 pag. 20. & 33. as it is printed in my *Bloody Irish Almanack*; and  
 any place mentioned there be upon any Design against this poor be  
 rowed and wasted Kingdom of England, let them remember the Scot  
 tish successe the last yeer, which my loving friend Master LILL  
 in the Epistle of his then ANGLICUS, predicted, in these wor  
 "It is not the least of mens fears, the return of the Scottish Arm  
 "such men have no eyes: Ha! I should be sorry that prudent peop  
 "uninvited by Parliament, should again come amongst us: For if th  
 "returne againe voluntarily without the Parliaments Commis  
 "on, they may come into the Kingdom, (it's true) with four  
 "bodies, but they shall return home over Tweed limping, haltin  
 "lame, with bruised bodies, and empty carriages, &c. I know n  
 who invited them, nor what Commission they had; but they, togeth  
 with some (viperous, not to be named) English men, and bloody Ir  
 vilians, came in a great Body, thinking at once to have swallow  
 the whole Kingdom, committing unheard of cruelties and outrage  
 but were through God's great mercy, by a handfull of men in compa  
 son, routed, slain and taken almost totally. The truth of this I su  
 pose is now known and beleaved throughout Christendom. My de  
 native Countrey LANCA SHIRE, where this unparalleled  
 story happened, bearing testimony thereof.

*Therefore let us extoll the justice  
 Of God the Lord, in whom our trust is :  
 Let us exalt and magnifie  
 The glorious Name of God most high.*

Of the WINTER.

Winter takes beginning upon Tuesday the 11. day of December, 57. minute past seven of the clock in the morning, he then rising by a quarter of an hour before his rising, then upon the vesp of the West angle, setting, and  $\psi$  in the very mid-heaven culminating. In the *Plunilunium* preceding, the  $\Delta$  degr. of  $\Delta$  rising, upon the ninth of December in  $\phi$  with  $\psi$ , in  $\phi$  to the  $\phi$ , will be a notable *Aetheri Portentum*, inclining the Ayre at that time to very dark, cloudy, moist, rainy Weather:  $\phi$  and  $\psi$  dispose chiefly this quarter, yet so as  $\phi$  and  $\psi$  have some share: besides, at the  $\Delta$  ingreſſo, the  $\Delta$  going from a  $\Delta$  of  $\psi$ , she is potent in  $\phi$ , direct to  $\phi$  in 25. degrees of  $\psi$ : All which discover, that the Winter is inclining rather to heat and moisture, then to cold and drier, wholly opposite to the time of the year, so that we may very

*Degenerant partes mutati enormiter anni,  
Annona in precio est, vix ere parabilis ullo,  
In populos spargant dira contagia febres.*

This  $\phi$  of  $\phi$  and the  $\Delta$ , Haly sayes, *quod erunt lites & interfecti-  
o, ac ſaltates mundi*: And another Author sayes, Although  $\psi$   
in the mid-heaven, *Non poterit contra operari, Solus enim Deus  
ſe hoc Avertere*: Which that it may be, let us earnestly pray unto  
for the ſame, theſe being the ſaddeſt and bardeſt times.

Of the ECLIPSES this Yeer 1649.

Here will be five Ecliſes viſible to the Inhabitants of the earth,  
three of the Sun, and two of the Moon; whereof both of the  
Moon, and middlemoſt of the Sun, will be viſible to the geo-  
reſiding in moſt parts of EUROPE, and will put them into  
great fear in expectation of the great mutation and ſucceeding effects  
it follow them. The firſt viſible one that will appear with us at  
LONDON, will be upon Wednesday the 16. of May, at two of  
the clock, and 33. min. in the morning: the poſition of the heavens,  
type of this Ecliſe of the Moon is thus, as it will appear at that  
moment of time, if the Ayre be clear.

The

# A PROGNOSTICATION,

The beginning of this lunar defection happeneth 25. minute before one of the clock in the morning, and so encreasing in darkness till 33. minutes past two of the clock; at which time, she is totally obscured, appearing of an ashlike colour, mingled with a pale blacknesse, and so continueth untill 23. minutes past three of the clock then beginning to recover her former luster, which she obtains 33. minutes past four of the clock in the morning, she then newly setting, the rising half an hour after; so that the whole continuance will be the hours 58. minutes, 22. seconds. The effects of this lunar obicuration will continue 121. dayes, four hours, from the time they begin to operate; for every hour the ☾ is in darknesse the effects continue the dayes, twelve hours; and every minute she is in darknesse, the effects operate 12. hours, &c. This Eclipse effects shew themselves in the beginning of *March* next succeeding, and will very forcibly work till the beginning of *July* following. The principall Dominators are chiefly ☿ and ♃; ☿ as exalted in the Mid-heaven; but ♃ hath more do in the Sign eclipsed, for it is in his House, Triplicity and Term; the ☾ hath somewhat to do in the ascendant, for ☿ doth wholly possess it at the middle of this her darknesse, for therein she is Exalted and hath a Triplicity; but she is most miserably afflicted with the ☿ in the heart of the *Scorpion*, a violent fixed Star of the first magnitude.

the nature of ♄ and ♀, the two Dominators : she is in the eighth and seventh houses of heaven, and immediately defluxeth to the ☿ of ♄, and ☿ of ♀ : but because the *Luminaries* in their defects are not permitted to have any peculiar influence, the generals therefore must be expected from their Disposers, the other five erratick Planets. Hence it is (as before is said) ♄ and ♀ are to be regarded chiefly : the ascendant of this Eclipse is the last degrees of ♋, or rather the whole Sign of ♋ ; the effects of which will be in those places subjected to that Sign, viz. *Russia, Polonia, Ireland, &c.* and those other places mentioned in my *Bloody Irish Almanack* ; amongst whom will be many Prodigies of evil nature, pains and griefs in the Throat, hot swellings and tumours, great Cattle shall be scarce, *quod rarum carum*, diseases in the Groyn, Thunder, Lightnings, destructive Hail-storms, scarcity of Corn, Wine and Fruits, and there shall be great effusion of Blood, terrible Rumours, and strong Windes : The ☿ eclipsed in the first ten degrees of ♋, doth incline many to commit Thefts and Robberies (and so much the more, for that she is in the eighth and seventh houses) by which means there may be much Bloodshed and Murder : *Item si sit defectus in octava & septima domo, lupum, institutionum, & mutationes secularum minatur, & mortem facinoribus.* All these things are aggravated by ♄ in ♋ in the sixth house ; for *Alou-nazar* saies, *quod erit fructuum detrimentum*, either by excess of heat, the plague of Locusts or Caterpillers, or such like noisom vermine, or else violent Windes shall destroy them before they can be gathered : there shall be much pain and diseases of the Eyes, and effusion of blood in the Southern parts : Howbeit if he were not so unhappily placed, might give us hopes, that these evils would be much lessened ; for he usually gives encrease of all things, a good temperance of Ayre, health of Body, tranquility and peace amongst Men, [which God of his mercy grant ;] but I much fear,

*Quid tantum Gradive paras, nam mitis ab alto  
Jupiter occasu premitur, Venerisque salubre  
Sydus hebet, motuque celer Cyllenius hæret,  
Et Cælum Mars solus habet.*

*What great things breedst thou Mars, why dost thou  
firown ?*

*Milde love in's Detriment goes tumbling down :  
Venus and Hermes dull in motion,  
And angry Mars doth rule the Skies alone.*

The people and places under ♋, ♌, ♍, ♎, especially that have the *Luminaries*, Part of Fortune, Ascendant and Mid-heaven in the first

# A PROGNOSTICATION,

first ten degr. of those Signs, shall in a divers manner feel the influence of this Eclipse, chiefly in the Moneths of *March, April, May, June 1650.*

The next new  $\text{J}$  following this lunar Eclipse, viz. the last day of *May 1649.* the  $\odot$  will be darkened to the quantity of four digits, 20. degr. of  $\text{II}$ , but in no wise visible to us, for the  $\text{J}$  having No latitude, goes above the  $\cdot$ , and doth touch him very little or not at all: It happens with us at our seven of the clock in the morning, but it is only visible to those that live in the North latitude of 70. and of longitude 287. degr. distant from us towards the West 16 hours. But because it is not to be seen by us, I have forbore the use of any further description thereof. And this is the second of the Eclipses that happen this year.

The third Eclipse in order, but the second visible with us, will be the  $\odot$ , happening upon Thursday the 25. of *October*: the middle thereof at 10. min. past 2. of the clock in the afternoon, as this sheweth.

The beginning of this eclipse of the  $\odot$  will be at ten minutes past one of the clock, and the end at ten minutes past three of the clock in the afternoon: so that the totall Continuance will be 12 hours: The effects of which Eclipse will continue in strength

years : but in regard the effects do not inchoate till the Month  
September 1650. and continue till that time two years, viz. Sep-  
tember 1652. I shall forbear to mention any thing thereof, untill the  
year, and in its proper place shall take an occasion to speak fur-  
ther, God willing.

*Tempora dura quidem, nondum durissima : Vates  
O utinam falsus timeam graviora, sed Astra  
Nescio quid crudele minantur, &c.*

The fourth will be an Eclipse totall of the ☽, upon Friday the 9th  
November ; the middle time thereof, or the apparent ☽ of the Lu-  
naries happening to be at six of the clock and 47. min. past in the  
evening, the beginning thereof will be at 37. min. past four of the  
clock in the morning, and the end within two min. of nine a clock,  
when we can in no wise observe, for that day the ☽ riseth 46. min.  
before seven of the clock, the ☽ then just setting ; so that she will be in  
eclipse under our Horizon one hour, 12. min. before she have re-  
covered her full light : The whole duration will be four hours, 21.  
The position of Heaven and face of the ☽ at that time being on  
this wise.

The

## A PROGNOSTICATION,

The ☿ setteth with the *Pleiades*, or seven Starres, and the ☿ or *Succula*, in the end of ☿, the Ascendant or Horoscope of *Ireland*, &c. and will put that Bloody Nation into great terrors, frights and amazements: the effects will worke with great violence for the space of 133. dayes, taking their beginning the tenth of *September* 1650. and continue to the 21. day of the next following: During which time the influence of the Eclipse (☿, which happened upon the 25. of *October* preceeding this Eclipse, is vehemently excited and stirred up; by which means is a duplication of influence, power and operation. If we examine the Dominators of this defect, we shall finde ☿ to challenge the chief and principall share; for if an ☿ of the Luminaries shall happen in the very Horizon, as this doth, the ☿ rising as the ☿ is eclipsed, we must take that degree of the Luminary which is in the East Angle, which in our Figure is the ☿, who being in the 27. of ☿, ☿ hath 16. Dignities: and if we look upon the Mid-heaven we shall finde ☿ to have 11. Dignities, and therefore he will partake and share in great measure with ☿: from whose position one, viz. ☿ as in ☿ in his Detriment, and ☿ newly entered in Exaltation: this Lord of the Ascendant, the other of the tenth house but both posited in the second house at the Eclipse, cannot but produce very admirable events to follow this lunar Eclipse, especially the Moneths of *September*, *October*, *November*, *December* 1650. *January* following. As for ☿, whom we see in a very formidable terrible ☿ of ☿ but the day before, viz. the eighth of *November* in 29. degr. 30. min. of ☿, Retrograde, ☿ in 29. degr. 30. min. of ☿, Direct: It premonstrates much discord and contentions, nay, some men will be in so great a height of malice one towards another they will clandestinely undermine each other, and study nothing much as revenge for supposed former injuries: now let *Ireland* be for the cry of their horrid Murders and bloody Slaughters is a loud and a heavy judgement as swift as Lightning is hastening towards them: Let our Mercuries, I mean *Pragmaticus*, *Elementis*, *Melancholicus*, with the whole Rabble and Litter of that Cerberian faction M. N. G. N. or G. W. *Aulicum*, *Bellicum*, nay, let all of them bark and belch out as much venom as the last yeer they did, at the Parliament, Army, City, Kingdom, and all good men: let them write, print, frame and invent lyes, such horrid, filthy lyes which some sort have been cause of so much bloodshed in many parts of the Kingdom, have caused such treacheries, revoltings and unbrave villanies in every part of the Kingdom, in *Wales*, in *Scotland*, no Age can parallell the like, nor any part of the world ever saw strange actions. If, I say, such of them be alive now (if Justice be not in the interim met with them) the poor seduced people of the Kingdom will cry out upon them, nay, and in fury destroy them.

but a little look back upon the late long siege at Pembroke, the insurrections and risings there, in Kent, Yorkshire, Essex, Sussex, and many other parts and places; the difficult siege of that miserable Town of Colchester, where the soldiers, as well Commanders, Souldiers and Town-folks were forced to live upon Hymphs, Horse-flesh eaters, nay, eaters of Dogs and other unheeded misery that this sad Kingdom was likely to have undergone, if the fomenters, contrivers and abettors of a second such like might have had their wished success, and intended tumultuous effect! let us never forget the late invasion of the Scots into this Kingdom: oh that men would see and admire those wonderful things, how God hath smitten them in all places, and even miraculously delivered this poor Kingdom in such a conjuncture of time, when there was an universall conspiracy and confederacy of the common enemy, both by Land and Sea! who by strange, insubtle insinuations, such a defection fell amongst us even here at L O N D O N, such snarling, backbiting and railing one at another; nay, and to make the breach wider, such abominable, scurrilous and lying Pamphlets and Discourses daily flying abroad, that the best of us were poisoned therewith: and I doubt me there was a permission, connivance, nay, a contrivance by some corrupt Members in several Places of trust, who may in time for their perjury, falsity and detestable viperous treachery, be discovered and receive their reward. It is high time we unanimously conjoin in the City, in the Countrey, in the Army, throughout the whole Kingdom; for a divided Countrey, a Kingdom, nay, a house divided cannot stand nor prosper: and in an Army, if the Souldiers be in mutiny, how can they oppose the common enemy? I beseech the God of heaven grant us, quiet the unsettledness of this worrill and distracted Kingdom, preserve the Religion, the Laws and Liberties of the People, discover all wicked, malicious, and malicious Plots: hitherto God hath prevented them, when the blow should have been given, when they should have been put to fire. For which, and all other mercies, let the hearts and eyes of all the people of the Kingdom be ever towards him for those most wonderful deliverances. Amen.

must needs give caution to all sorts of people, or to as many as either know me, or desire these my annuall observations, that they give no credit to the mercenary writings of any who make use of other mens names to authorize their foolish and ridiculous pocket-picking pamphlets: such (for these four or five by-past yeers) and

## A PROGNOSTICATION,

amongst the rest, hath been that Pamphlet entituled *bloody Almanack*, published by *Henry walker*, the weekly *Luke Harrancey*, who though he be not ashamed of his own that paper-kite, dressed up in borrowed feathers, which once a yeer he hath let fly abroad in myriads throughout the Kingdom, for the lucre of a few beggar-pence, yet he weekly hath disowned his own name. It is conceived his judgement being depraved, and none any sort capable of this kinde of learning, though he hath much upon Hebrew roots, that it tareth with him as it were with the purest and most richest Wine, which was musty by reason of that Vessell wherein it is inclosed, is by sophistication corrupted, which is the greatest fault, and the most intollerable deceit that may befall any man. What a misery it is, when some casting aside every thought of benefiting the Republick, either for their own private profit, or to feed their own discontented humours! I pitty the ignorance (though not worthy of punishment is the impudence) of the Authors of many Pamphlets now daily swarming in the most eminent and publike places of the City, and continued vended in every corner thereof by a loose and idle sort of people: but I much more wonder at the simplicity of those who so eagerly hunt after them, and so easily part with their money for such trumpery and trash, and pay such high and excessive rates for them, that the beggars and pedlarly vendors (laughing at their follies) eat bread out of theirs and the honest Tax-bearing House-keepers mouthes, whole livelihood is chiefly by selling Books: Indeed there is a great fault in many Printers who for their own ends will adventure upon any thing they may say, it is come to this passe already, that whatsoever the State dislikes, shall be imprinted and divulged by them (though both absurd and scandalous) with twice more licentiousnesse, then any Book lawfully commanded: But it tend to division, raise tumults, abuse the Parliame

black friends, disquiet the people, and possesse them  
 in heart-burnings one against another, such as of late  
 have been endeavoured by the filthy language in those  
 venomous Mercuries *Pragmaticus*, *Stentilianus*, *Melancholicus*  
 and many other wicked Pamphlets, they will disperse more  
 apace, and in one week throughout the City and King-  
 dom, then Authority shall be able to divulge, in a year,  
 toward the settling of Unity and Peace in the Church and  
 common-wealth: But I trust in God he will direct the  
 Parliament, and such whom it doth concern, to take a  
 due course to root these pestiferous Weeds out of the  
 Nations Garden.

Courteous Readers, I am entreated to give notice, that  
 there is a Book in the Presse (if not already published)  
 intituled, *Urania Practica*, or, *Practicall Astronomy*, shewing  
 how to calculate the places and eclipses of the *Lumina-*  
*ria*; also, an *Ephemeris* of the *Sunne* and *Moon* for nine-  
 teen years, beginning 1648. and ending 1667. with  
 Tables of the Eclipses, solar and lunar: wherein also are  
 many other Rules and Tables Astronomicall and Nau-  
 ticall. Composed by my loving friends, *Vincent Wing* and  
*William Leybourn*.

*Parce precor mendis, non parva injuria certe est  
 Si mihi Calcographi crimina des vitio.*

Reader, the Printers faults are none of mine:  
 correct the errours, else the fault is thine.

A TABLE

**A TABLE of the Longitude and Latitude**  
**of some notable Cities and Towns in England,**  
*Scotland and Wales.*

	Longitude.		Latitude.
